

FEATURES:

- Comply with RoHS standard, UL1950, IEC950 safety procedures
- Wide voltage input range,broadband noise filtering;Low ripple output
- Typical efficiency 82%
- High isolation voltage,short circuit,overload,overheat protection self-recovery
- Miniaturized design
- Fast dynamic response
- Size:313*94*81mm
- Weight:160g
- Widely used in military,communications,industrial control,transportation,electric power,new energy and scientific research and experiment and other fields

**Unless specified, otherwise all other parameters are tested under the following conditions: nominal input voltage, pure resistive load, 25°C room temperature environment.

Dimensions and Recommended Layout

Unit:mm

Recommended Circuit

**Remark:**

Adding input capacitor CIN helps to improve electromagnetic compatibility. Electrolytic capacitor 47 uf-100uf CIN is recommended. If the module is connected to a digital circuit, add cout, cout1, cout2

Noted

1. Input current: Ensure that the output current of the power supply meets the instantaneous starting current of the power module (that is, twice the average input current of the power module).
2. Output load requirements: Avoid no-load use. When the actual power consumption of the load is less than 10% of the rated output power of the module or no load occurs, connect an external resistance to the output end (the sum of the external resistance and the load power is greater than or equal to 10% of the rated load) or select a module with a smaller rated power.
3. The external capacitance of the output end should not be too large; otherwise, the module may be overcurrent or poorly started. For details, see the external capacitance recommendation table.
4. External LC filter circuit can be connected for occasions with high ripple noise requirements.
