Connection mode

1. Voltage regulation connect

TOP VIEW

 :Input voltage:5V(4.5~7V),12V(11~16V,24V(21~28V)

 :External control power supply

Input 0~2.5VDC voltage can be continuously adjusted to control 0~rated output voltage, external control power depends on the voltage, the required power is weak, the input current is generally not more than 200uA

Note: The stability of the external control voltage directly affects the stability and linearity of the output high voltage, so be sure to ensure the quality of the external control voltage signal

2. Potentiometer voltage regulation connect

TOP VIEW

 : Input voltage: 5V(4.5~7V), 12V(11~16V), 24V(21~28V)

Note: The external potentiometer can choose 5K, 10K, 20K potentiometer, 10K multi-turn potentiometer is recommended
